REASON FOR ALLOWANCE

1. Claims 1,4-32,34-37, 42 are allowed. Claims 38-41 are cancelled (paper #6 election).
2. The following is an examiner's statement of reason for allowance:

The prior art fails to teach or suggest a printed circuit board assembly having spaced apart first and second surfaces the PCBA coupled to the cable to receive the data signal from the touch pad; a support having a first surface upon which the touch pad and the PCBA are disposed; a shield having spaced apart first and second surface, the shield over covering at least a portion of the touch pad, the cable, and the PCBA and defining a through opening in the first surface overlying and permitting access to the touch pad and a seal coupling the shield to the support and the cable to enhance at least one of water proofing and theft vulnerability of the apparatus as claimed with combined limitation of claim 1.

The prior art fails to teach or suggest a printed circuit board assembly having spaced apart first and second surfaces the PCBA coupled to the cable to receive the data signal from the touch pad; a support having a first surface upon which the touch pad and the PCBA are disposed; a shield having spaced apart first and second surface, the shield over covering at least a portion of the touch pad, the cable, and the PCBA and defining a through opening in the first surface overlying and permitting access to the touch pad; and an anti-theft securing the shield to the PCBA to enhance at least one of water proofing and theft vulnerability of the apparatus wherein the shield defines at least one injection port through which encapsulation resin is inject able into security chamber

space and the anti theft latch is molded into encapsulation resin such that upon setting and curing of the resin the PCBA is not readily disassembled from the apparatus as claimed in claim 12.

The prior art fails to teach or suggest a printed circuit board assembly having spaced apart first and second surfaces the PCBA coupled to the cable to receive the data signal from the touch pad; a support having a first surface upon which the touch pad and the PCBA are disposed; a shield having spaced apart first and second surface, the shield over covering at least a portion of the touch pad, the cable, and the PCBA and defining a through opening in the first surface overlying and permitting access to the touch pad; and an anti-theft securing the shield to the PCBA to enhance at least one of water proofing and theft vulnerability of the apparatus , the anti theft latch having a spring as claimed in claim 14.

The prior art fails to teach or suggest a printed circuit board assembly having spaced apart first and second surfaces the PCBA coupled to the cable to receive the data signal from the touch pad; a support having a first surface upon which the touch pad and the PCBA are disposed; a shield having spaced apart first and second surface, the shield over covering at least a portion of the touch pad, the cable, and the PCBA and defining a through opening in the first surface overlying and permitting access to the touch pad; and an anti-theft securing the shield to the PCBA to enhance at least one of water proofing and theft vulnerability of the apparatus , the anti theft latch includes a metallic material as claimed in claim 15 and wherein the portion of the anti theft latch is welded to the second surface of the shield as claimed in claim 17 and anti theft latch is

electrically coupled to the PCBA and double sided adhesive material as claimed in claims 18,19.

The prior art fails to teach or suggest a printed circuit board assembly having spaced apart first and second surfaces the PCBA coupled to the cable to receive the data signal from the touch pad; a support including at least one of polycarbonate and glass and the support having a first surface upon which the touch pad and the PCBA are disposed; a shield having spaced apart first and second surface, the shield over covering at least a portion of the touch pad, the cable, and the PCBA and defining a through opening in the first surface overlying and permitting access to the touch pad; and an anti-theft securing the shield to the PCBA to enhance at least one of water proofing and theft vulnerability of the apparatus as claimed in claim 24.

The prior art fails to teach or suggest a method of ruggedizing and securing a touch pad assembly having the step of supporting a touch pad and a printed circuit board assembly with a lens, such that the touch pad and PCBA lie in a first surface of the lens; coupling a cable between the touch pad and the PCBA and providing a shield having spaced apart first and second surface to cover the touch pad, cable and PCBA, the shield defining an opening sized to permit accessing the touch pad and coupling a seal between the shield and the lens the seal in contact with the cable, to enhance at least one of water proofing and theft vulnerability of the assembly as claimed in claims 27,32,34,35.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
